

DISTRIBUTOR ANNOUNCEMENT

Central Research Laboratories (CRL) is pleased to announce the addition of our newest distributor, Benchmark Products. Through this collaboration, Benchmark Products will incorporate the Single-Use Beta Bag product line into their Suite® product collection and operate as the exclusive distributor of Suite® Single-Use Beta Bags in the United States. We are excited to be moving forward with this new endeavor as this will enhance the high-quality products we provide and give customers access to additional services, including inventory and custom kitting options.

About Single-Use Beta Bags

Single-Use Beta Bags provide an alternative to standard stainless-steel containers used in aseptic processing. This single-use technology is a cost-effective way to transfer components, supplies, and tools into isolation or to remove samples or waste without risking cross-contamination. Single-Use Beta Bags are available in a 190 mm size and are compatible with both CRL and DPTE® XS Alpha Ports.

For more information or to learn more about our newest product, contact info@crlsolutions.com.
